Utility function

$$U = \mathbb{E} \left[\sum_{t=0}^{\infty} \beta^t u(c_t, N_t) \right] \quad (1)$$

With

$$u(c_t, N_t) = \frac{c^{1-\gamma} - 1}{1-\gamma} - \frac{N^{1+\phi}}{1+\phi}$$

So we have the following objective function of the household :

$$U = \mathbb{E} \left[\sum_{t=0}^{\infty} \beta^t \left(\frac{c^{1-\gamma} - 1}{1-\gamma} - \frac{N^{1+\phi}}{1+\phi} \right) \right]$$

$$k_{t+1} = (1 + r_t)(k_t - c_t + y_t) \quad (2)$$
